

Potato R&D Program

Duration: 2019–2026

Host Institution: Benguet State University

Project Description

The Potato R&D Program focuses on improving micropropagation system, it can help maintain and sustain disease-free and true-to-type planting materials, specifically on establishing the optimal number of sub-culturing tissue culture plants, retrieval and characterization of the vanishing potential varieties, and in enhancing protocol on microtuber production.

Experts Needed

- Molecular Biologist
- Hydroponics
- Aeroponics Scientist
- Mechanical Engineer
