

Exposure of Filipino Consumers to Specific Contaminants Migrated from Materials Used as Packaging for Food and Beverages

Duration: 2022-2035

Host Institution: DOST - Industrial Technology Development Institute (ITDI)

Project Description

The program aims to put together the results from the Determination and Profiling Programs, surveys on population, and other secondary data to compute for exposures and risks to packaging contaminants resulting from continuous consumption. The program aims to put packaging contaminant guidelines for the public regarding their consumption and stakeholders regarding their production. It will also allow regulatory agencies to set national limits and monitor deviations.

Phase 1: 2022-2025

Phase 2: 2026-2030

Phase 3: 2031-2035

Expertise Needed

- Social science *
- Statistics *
- Public Health *

* with competence/experience in exposure and risk assessment, communication, and management, needed for proper computation/evaluation of exposures and risks and simplification of technical information for policy making
