

Predicting malnutrition among children under five year old with the use of Classification techniques in Data Mining

Duration: 2021-2022

Host Institution: DOST – Food and Nutrition Research Institute (FNRI)

Project Description

This project aims to develop software application that can predict the nutritional status among under five children using data on child feeding practices, height and weight measurements of both the child and mother, maternal information, socio-demographic and economic profile of mother, and birthweight of the child.

Experts Needed

- Data Scientist
- Mobile App Developer
